**SEATORQUE CONTROL SYSTEMS BECOMES USA DISTRIBUTOR
FOR QUICKCUTTER™ Rope Cutters**

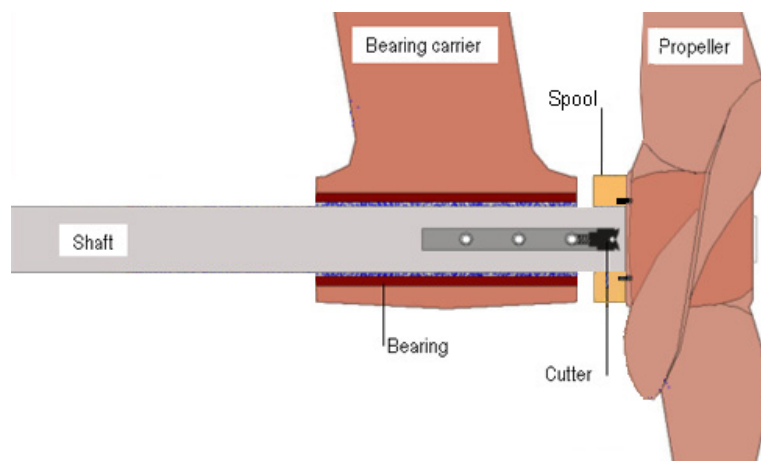

Stuart, Florida. Seatorque is now a USA distributor for QuicKutter™ Rope Cutters manufactured by Quickwater Marine, Australia. The revolutionary QuicKutter™ rope cutter system eliminates the problem of rope and line becoming dangerously tangled in props and shafts.

The system has no moving parts to wear out, and is easy to install.

- ✓ QuicKutter™ cuts rope, line and twisted steel line.
- ✓ Extremely competitively priced.
- ✓ International Patent applied for.
- ✓ Available in 2 sizes: Series 16 for shafts 1" - 2", Series 25 for Shaft 2" - 4"

How does the Quickwater QuicKutter™ System Work? The Quickwater spool is fixed to the propeller between the propeller and bearing carrier to prevent the rope or line from wrapping around the shaft. It provides a surface for the rope or line to wrap around to enable the QuicKutter™ blades to continually cut the coils of rope or line as they form and are pressed against the QuicKutter™ blades.

The QuicKutter™ is fixed to the bearing carrier and protrudes out over the Quickwater spool surface ensuring that the clearance does not allow rope or line to pass under the blade and that rope or line is continually cut away to allow a continuous flow of water to exit from the bearing.
