SEATORQUE

The BOSS™
Bolt On Shaft System

CITY OF LONDON PORT AUTHORITY, UK SELECTS THE SEATORQUE BOSS™ ENCLOSED SHAFT SYSTEM FOR INCLUSION IN NEW LOW EMISSION CATAMARAN LAUNCHES.

STUART, FLORIDA USA. Due to the efforts of Seatorque's UK Representative, H4 Marine and the considerable interest generated at the Seawork 2008 show, the BOSS™ oil-lubricated, shaft system, from Seatorque of the USA, has been selected by The Port Authority of London and Alnmaritec for inclusion in new low emission catamaran launches being built as the City of London's harbour patrol and pilotage vessels. These vessels will also be equipped with the acclaimed QuickKutter Rope Cutters, available through H4 Marine and Seatorque Control Systems in the USA.

Several manufacturers around the world are now installing this innovative and efficiently integral system into new builds of a wide range and variety of vessels.

Seatorque is the proud recipient of both the IBEX Innovation Award and the METS DAME Design Excellence Award.

For more information about the Port Authority of London's "low emission" project and other Seatorque news and events, visit www.seatorque.com or call Seatorque Directly 1+772-220-3020. For H4 Marine, Contact www.H4marine.com 1 + 44 (0) 1822 852466
